November 2026

Wasteland to Parkland

Restoring legacy mine sites and recovering critical minerals.

Investor Presentation

MOUNT SICKER

Our Flagship Project

HISTORIC MINING DISTRICT

4 former producing mines.

EXPLORATION DISCOVERY

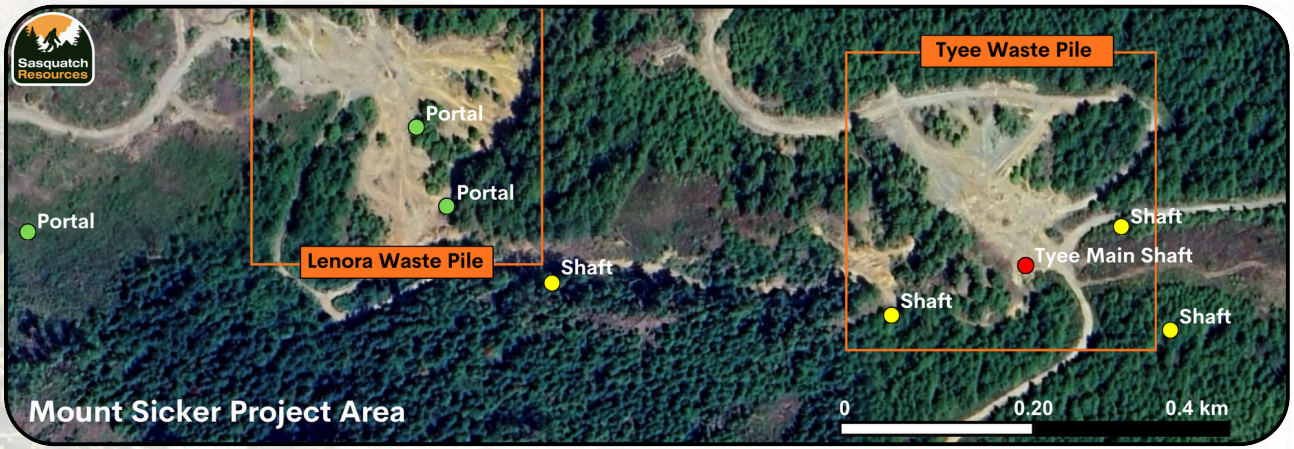

Started as "normal" exploration exercise - but*

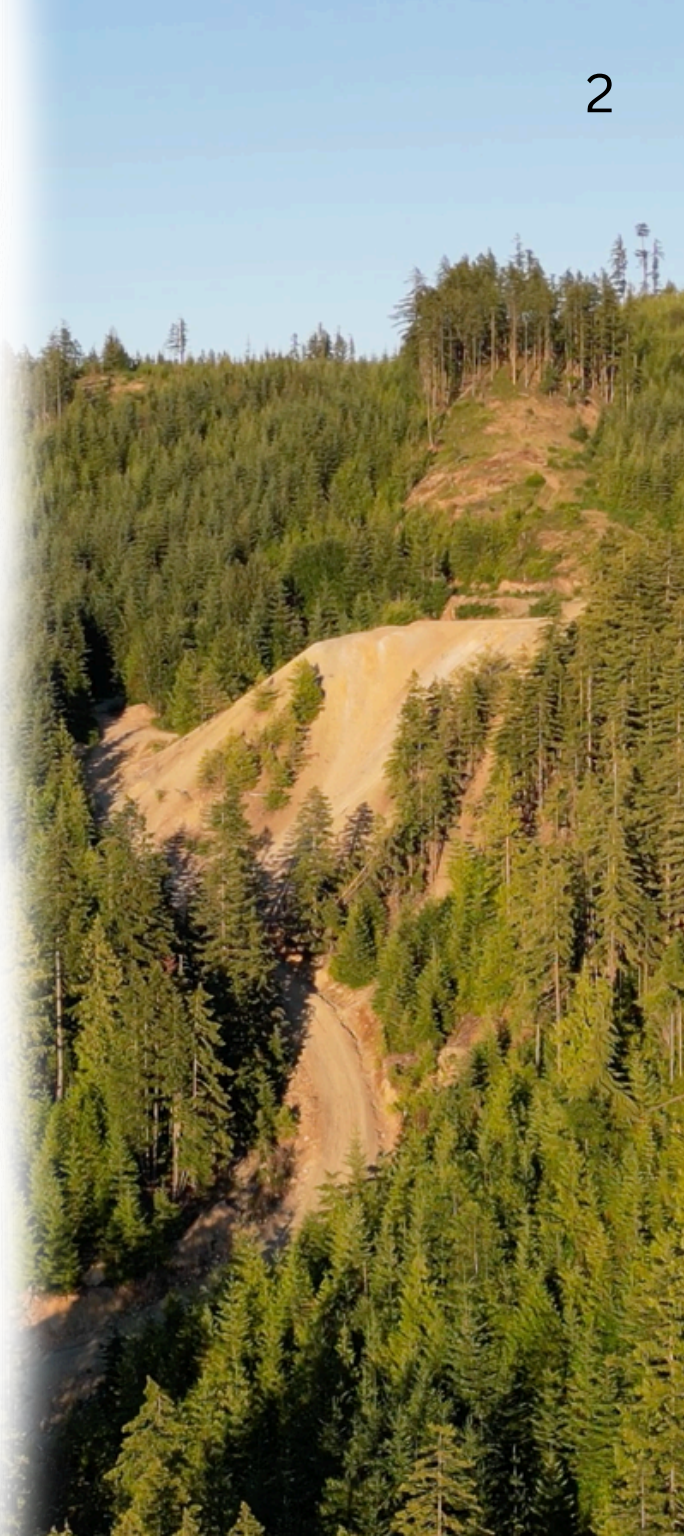

300,000t WASTE ROCK

Sitting at surface, containing gold, silver, copper and zinc.

SIGNIFICANT HAZARDS

Both environmental and physical hazards across the property.

THE CHALLENGE

Historic mining practices left behind significant environmental and safety risks.

SULPHIDE WASTE PILES

300,000t+ sulphide-containing waste rock sits in piles at surface.

ACID GENERATION POTENTIAL

When exposed to rain, sulphides can create acid run-off.

METAL LEACHING

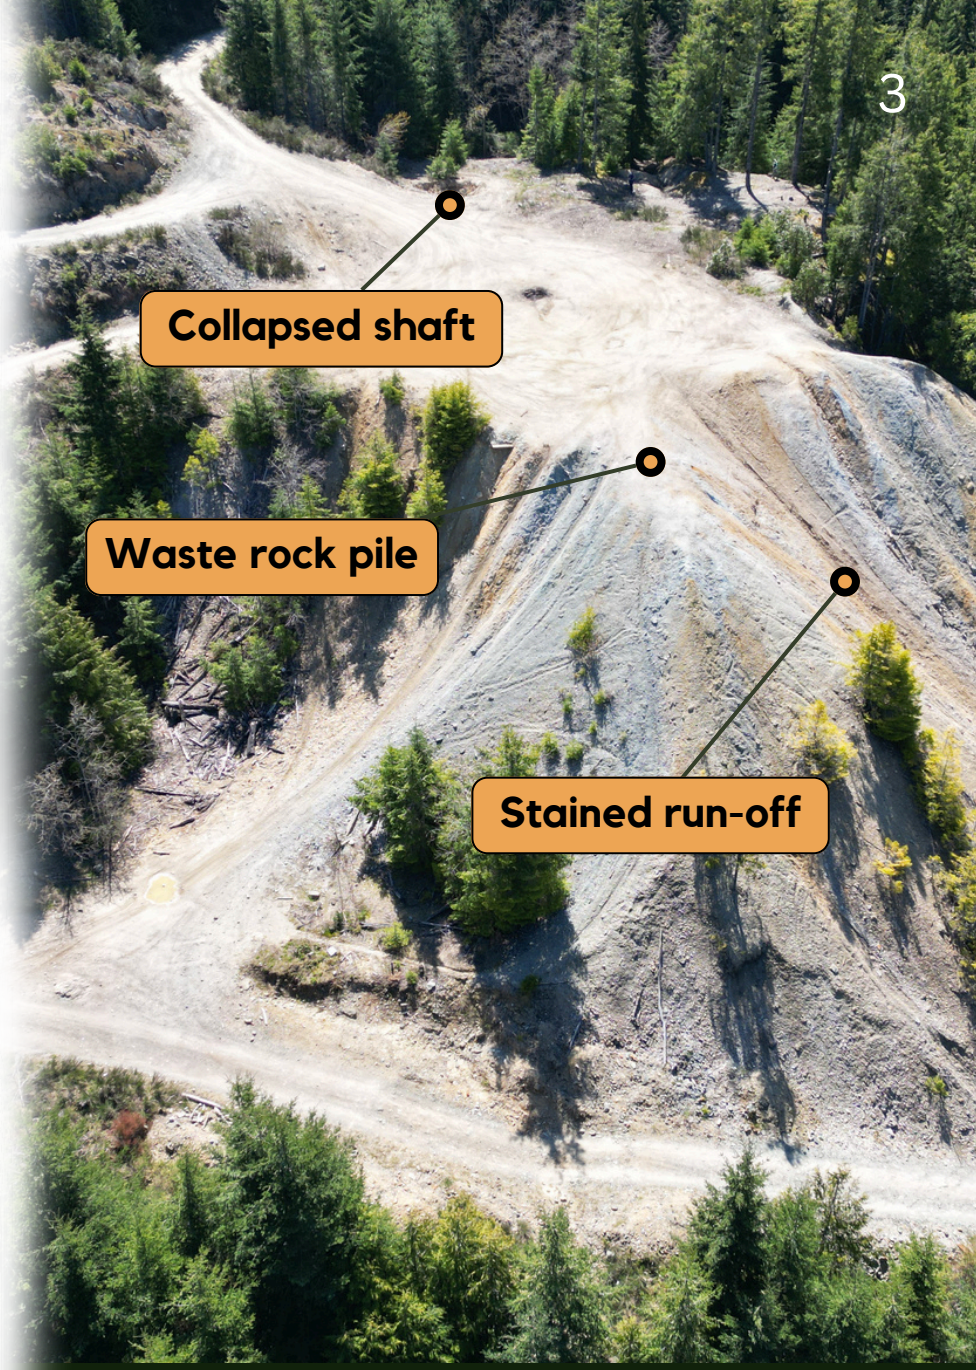

Metals such as copper, zinc, lead, sulphur, silver and gold can leach into the environment.

PHYSICAL HAZARDS

Abandoned shafts, adits and unstable ground pose ongoing public safety risks.

DISTURBED LAND

Waste piles and erosion impact ecosystem health and aesthetics.

MORE THAN 2,000 LEGACY MINE SITES EXIST ACROSS BRITISH COLUMBIA.

THE SOLUTION

RECOVER. REMOVE. RESTORE.

A proven, low-impact approach to address legacy sulphide waste.

WASTE ROCK

Historic waste piles from legacy mining.

MOBILE ORE SORTING

Sensor-based technology separates sulphide-bearing material from non-acid generating rock.

SULPHIDE CONCENTRATE

High sulphide material transported off-site and sold.

CLEAN ROCK RETURNED

Non-acid generating material used for site rehabilitation.

CLOSED-LOOP PROCESS

No process water discharge.

NO ADDED CHEMICALS

Separation achieved without chemicals.

ENGINEERING COMPLETED

Detailed study and test work complete.

PROVEN TECHNOLOGY

Established and field-tested.

THE INVESTMENT OPPORTUNITY

Legacy mine waste is a hidden opportunity.

Sasquatch's approach to legacy mine waste is a simple, efficient solution to a century-old problem.

01

PROBLEM

- 2000+ legacy mine sites in BC
- Environmental hazards
- Acid-generating waste
- Public safety risks

02

SOLUTION

- Mobile ore sorting removes sulphides
- No chemicals used; no new waste or tailings created
- Recover both metals and contaminants
- Minimal cost outlay vs. traditional mining

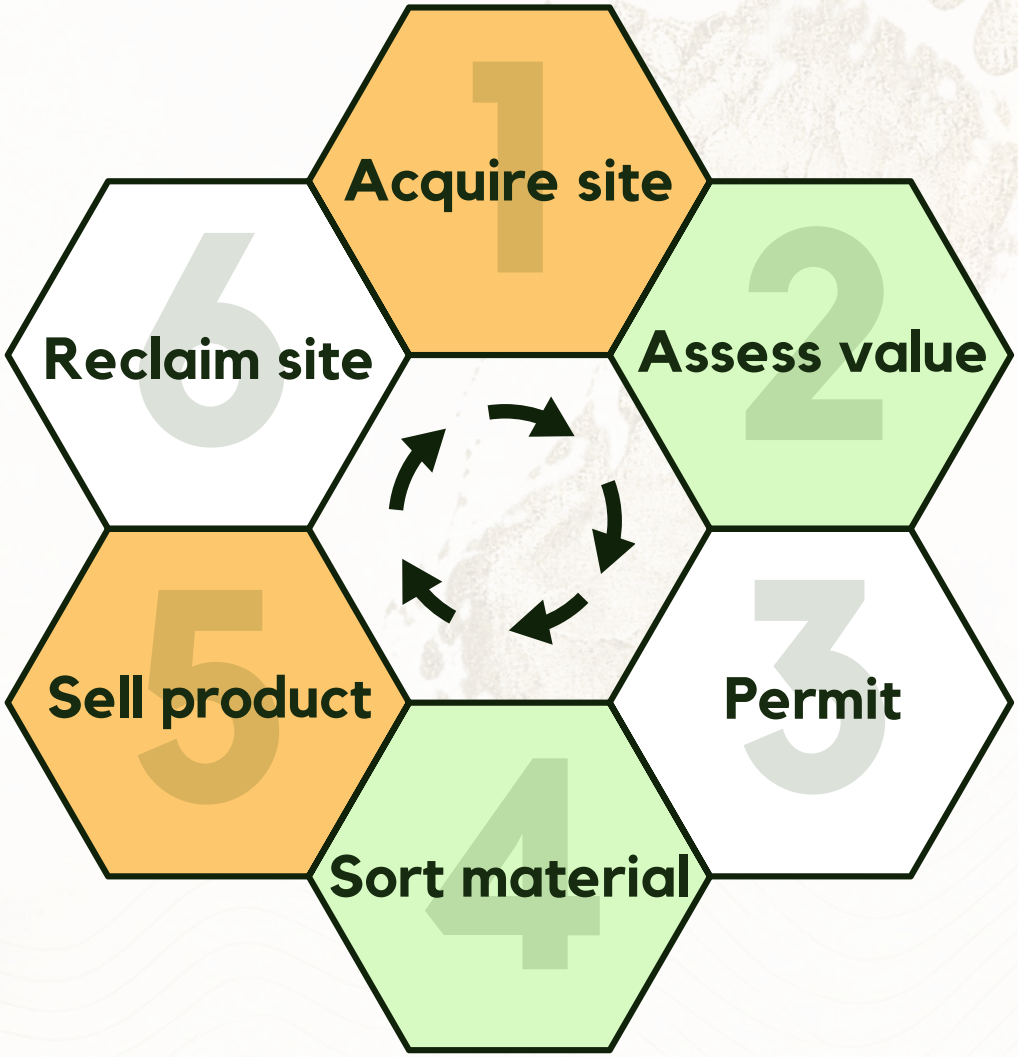

03

RESULT

- Revenue from recovered metals
- Environmental restoration
- Ongoing community and government support
- **Repeatable model**

WHY THE MODEL WORKS

Low capital intensity, simplified permitting process, fast path to revenue, repeatable model.

ORE SORTING

What ore sorting can do to the grades.

The waste will be crushed and sorted on-site using a mobile system. High-grade waste and fines will be transported off-site to an advanced processing facility.

Average grades across Mount Sicker waste rock - from a 97-sample surface grid program, and from a 528kg ore-sorting test (TOMRA XRT, Germany) demonstrate significant added potential value from the ore sorting process.*

Au	Ag	Cu	Zn
Gold	**Silver**	**Copper**	**Zinc**
6.43 g/t	**180 g/t**	**4.92%**	**8.7%**
After ore sorting	After ore sorting	After ore sorting	After ore sorting
Before ore sorting 1.86 g/t	Before ore sorting 48.6 g/t	Before ore sorting 1.22%	Before ore sorting 3.05%

*Note: the TOMRA test material may be different from the grid sampling material.

PROGRESS WITH PROOF OF CONCEPT

Grid sampling, ore sorting, acid testing, and reclamation planning completed.

Work completed

01 MILESTONE	02 STATUS
• Grid sampling (2 programs)	• Ag, Au, Cn, Zn identified
• Ore sorting (pilot testing)	• High-grade product produced
• Acid testing	• Benign rock remains after sorting
• Preliminary engineering	• QP processing plan complete
• Permitting	• Permitting underway
• Land rehabilitation	• QP closure report draft complete

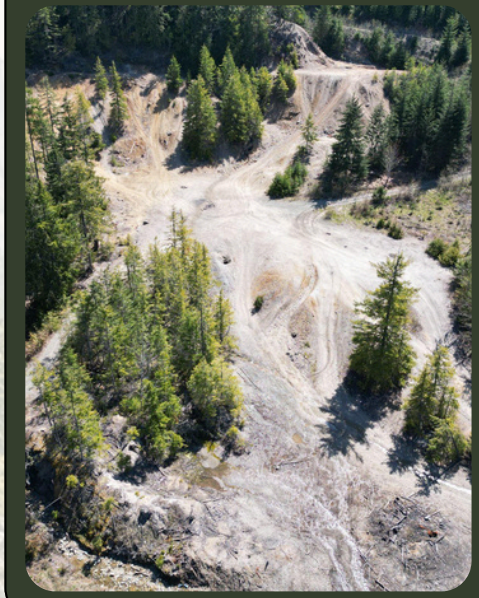

RENDERING: BEFORE & AFTER

From hazard to habitat.

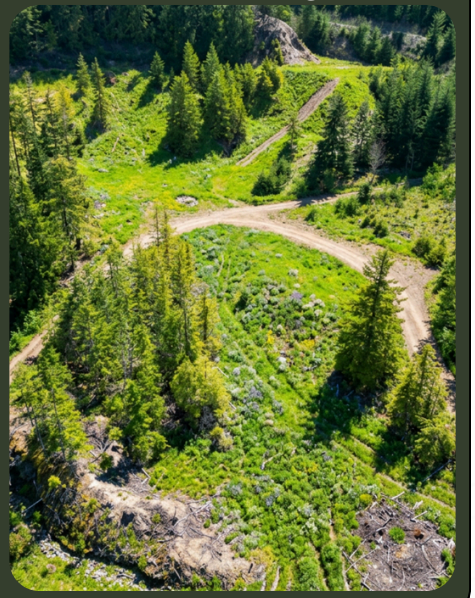

Hazards addressed | **Reclamation** | **Water quality improvement** | **Community benefit**

Lenora

Before

After (rendering)

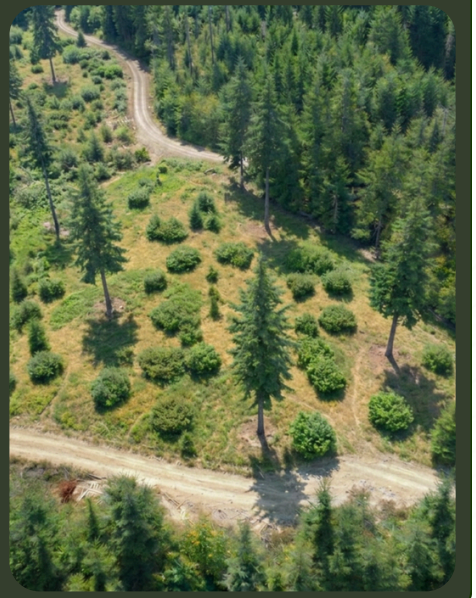

Tyee

Before

After (rendering)

ENVIRONMENTAL & COMMUNITY BENEFITS

Recovering critical minerals. Restoring natural landscapes. Creating local jobs.

- ✓ Hazards addressed
- ✓ No new tailings
- ✓ Mobile processing
- ✓ Critical mineral recovery
- ✓ Nature restored

RECLAMATION PROJECTS PIPELINE

Building a portfolio of reclamation projects.

Near Duncan

Mount Sicker

Four former producing mines (1895-1915), 300,000+ tonnes of mineralized waste rock containing gold, copper, silver and zinc. Most advanced with permitting underway.

Mount Sicker area

Copper Road

A VMS system exposed by fresh logging cuts within 2km of Mount Sicker project area. Grid-sampling program complete averaging ~1% Cu.

Lake Cowichan

Blue Grouse

High-copper waste from early 1900s mining operation, similar in size to Mount Sicker and ~30km away. Grid-sampling program complete averaging 2-3% Cu.

Quadra Island

Santana

Waste piles and visible copper in large surface outcrops, from mining circa 1915. Grid-sampling program complete with results averaging 3.09% Cu, 0.818g/ton Au, and 84.8g/ton Ag.

Port Alberni region

Alberni Claims

At least two significant areas where logging roads have been built through high-grade copper. Partial grid-sampling program complete over 20m of one returned 1.62% Cu. Waste piles with gold.

HARD ROCK PROJECTS

While we evaluate for waste rock potential, hard rock potential emerges.

Mount Sicker area

Copper Road

Waste rock on the road created by large visible copper mineralization at surface. Outcrop sampling returning 2-5% Cu with geophysics indicating substantial high-density anomalies.

Quadra Island

Santana

Visible copper in large surface outcrops surround the waste pile. 58 metric tonne bulk sample taken in 1917, which had average grades of 79.4 g/t Ag, 1.4 g/t Au, and 4.8% Cu.

Near Sardis

Slesse

1,567 hectares of gold claims on Canadian-side, immediately adjacent to the historic Red Mountain Gold Mine on the USA-side. Average head-grades over 30 years at Red Mountain of approximately 20 g/t Au.

Port Alberni

Alberni Claims

Massive mineralized zone discovered by recent logging road construction measures at least 3km long by 500m wide, with an elevation change of 350m. Early sampling suggests Cu, Au, and Mo potential.

SCALING THE MODEL

One project sets the precedent.

Scalability is key. Following a simple, three-step system, Sasquatch hopes to recover and remediate, rinse and repeat.

- Mount Sicker
- Copper Road
- Blue Grouse
- Santana
- Alberni Claims
- Future Acquisitions

WHY SASQUATCH NOW

The right assets. The right model. The right time.

Since the acquisition of the Mount Sicker project area in 2022, gold, silver and copper have all delivered strong price appreciation, reinforcing the economic opportunity.

- ✓ **Metal prices rising**
- ✓ **Critical minerals demand**
- ✓ **Regulatory focus on reclamation**
- ✓ **Permitting momentum**
- ✓ **Multiple projects**

COMMODITY VALUE INCREASE SINCE MOUNT SICKER ACQUISITION (2022)

COMMODITY	PERCENTAGE
Gold (Au)	+ ~**160%**
Silver (Ag)	+ ~**240%**
Copper (Cu)	+ ~**85%**

KEY TAKEAWAYS

Recovering resources. Rebuilding nature.

1. Legacy mine waste contains valuable metals.

2. Sasquatch can recover those metals with low-cost ore sorting.

3. The process cleans up environmental hazards and has broad stakeholder support.

4. Mount Sicker is the first project in a repeatable pipeline.

CRITICAL ELEMENTS

There are risks to consider and issues to address.

Sasquatch's approach to legacy mine waste is a simple, efficient solution to a century-old problem. But the path forward is not entirely paved.

01

METALLURGY

Legacy waste rock will typically be both oxidized and variable in composition, and these will present challenges for end processors which may materially impact the economics.

02

PERMITTING

While permitting waste rock reclamation operations may be more streamlined than permitting full-scale mines, there is still no "dedicated" permitting regime for waste rock reclamation, and so it is difficult to predict precisely which aspects of the permitting process may or may not apply and to which extent they will apply.

03

FIRST NATIONS

As with any project in BC or Canada, First Nations consultation is a critical component. First Nations support will be required before we can commence any large-scale operations. While this adds an additional layer of investment "risk", it adds further review and accountablity to the project which we welcome.

DISCLAIMERS

CONFIDENTIALITY

This document and all information contained in this document are confidential, proprietary and for the use solely by the prospective investors and their professional advisors. By your acceptance of this document, you agree not to do any of the following in respect of this document or any information contained herein without our prior permission in writing: (1) use; (2) disclose or divulge; (3) copy; (4) retain; (5) reproduce; (6) publish; (7) transmit; (8) make available; or (8) condone, permit or authorize the use, disclosure, copying, retention, reproduction, transmission or publication thereof, including to the public or media. These obligations shall survive indefinitely.

SECURITIES LAWS

This document is not, and under no circumstances is to be construed as, a prospectus or an advertisement or a public offering of securities in any province or territory of Canada or elsewhere and does not constitute an offer for the sale of securities. No securities have been or will be qualified for sale to the public under applicable securities laws. No securities regulatory authority in Canada, the United States of America or any other jurisdiction has reviewed or in any way passed upon this document or the merits of any securities and any representation to the contrary is an offence.

INFORMATION PROVIDED IN THE DOCUMENT AND FORWARD LOOKING STATEMENTS

We make no representation or warranty as to the accuracy or completeness of any information included in this document. The information is considered current but will not be updated at any time hereafter. Certain statements in this document are “forward looking statements” . Any statements that express or involve discussions with respect to predictions, expectations, beliefs, plans, projections (financial or otherwise), objectives, assumptions or future events or performance are not statements of historical fact and may be forward-looking statements. Forward-looking statements are based on expectations, estimates and projections at the time the statements are made that involve a number of risks and uncertainties which would cause actual results or events to differ materially from those presently anticipated. These forward-looking statements reflect our current beliefs with respect to future events and are based on information currently available to us. Forward-looking statements involve significant known and unknown risks, uncertainties and assumptions, and many factors could cause actual results, performance or achievements to be materially different from any future results, performance or achievements that may be expressed or implied by such forward-looking statements. You should not place undue reliance on the forward-looking statements. These forward-looking statements are made as of the date of this document and we do not intend to, and we do not assume any obligation to, update or revise these forward-looking statements to reflect new information, events, results or circumstances or otherwise after the date on which such statement is made as to reflect the occurrence of unanticipated events, except as required by law.

TECHNICAL INFORMATION

The scientific or technical information in this document pertaining to the company’s mineral properties was as disclosed in previous press releases as indicated.
